

Karen Scripts Directory

This directory contains utility scripts for Karen's runtime management, auditing, and maintenance.

Available Scripts

🔍 audit_runtime_vllm.sh

Purpose: Comprehensive audit of Karen's vLLM runtime integration

What it does:

- Verifies vLLM is wired as a real live response engine
- Tests vLLM server endpoints
- Validates provider configuration
- Checks routing logic
- Verifies metadata tracking
- Tests streaming implementation
- Generates detailed audit report

Usage:

```
# Basic audit
./scripts/audit_runtime_vllm.sh

# With custom configuration
KAREN_VLLM_BASE_URL=http://localhost:8001/v1 \
KAREN_VLLM_MODEL=your-model-name \
KAREN_API_URL=http://localhost:8000 \
./scripts/audit_runtime_vllm.sh
```

PROF

Environment Variables:

- **KAREN_VLLM_BASE_URL** - vLLM server endpoint (default: `http://localhost:8001/v1`)
- **KAREN_VLLM_HEALTH_URL** - vLLM health endpoint (default: `http://localhost:8001/health`)
- **KAREN_VLLM_MODEL** - Model to test (auto-detected if not set)
- **KAREN_API_URL** - Karen API endpoint (default: `http://localhost:8000`)

Output:

- Console output with color-coded results
- Detailed markdown report: `vllm_audit_report_YYYYMMDD_HHMMSS.md`

Exit Codes:

- 0 - Audit passed

- [1](#) - Audit failed (critical issues found)

Documentation:

- Quick Start: [docs/VLLM_AUDIT_QUICKSTART.md](#)
- Full Documentation: [docs/VLLM_RUNTIME_AUDIT.md](#)
- Executive Summary: [VLLM_AUDIT_SUMMARY.md](#)

Adding New Scripts

When adding new scripts to this directory:

1. Make executable:

```
chmod +x scripts/your_script.sh
```

2. Add shebang:

```
#!/usr/bin/env bash
set -euo pipefail
```

3. Document in this README:

- Purpose
- Usage
- Environment variables
- Exit codes

4. Follow conventions:

- Use color codes for output (see `audit_runtime_vllm.sh`)
- Generate reports in markdown format
- Support environment-based configuration
- Provide helpful error messages
